Understanding LangServe

- LangServe helps developers deploy LangChain runnables and chains as a REST API.
- This library is integrated with FastAPI and uses pydantic for data validation.
- In addition, it provides a client that can be used to call into runnables deployed on a server. A JavaScript client is available in LangChain.js.

What is a REST API?

REST API Model

LangServe Benefits

- Input and Output schemas automatically inferred from your LangChain object, and enforced on every API call, with rich error messages
- API docs page with JSONSchema and Swagger
- Efficient `/invoke/`, `/batch/` and `/stream/` endpoints with support for many concurrent requests on a single server
- All built with battle-tested open-source Python libraries like FastAPI, Pydantic, uvloop and asyncio.

Thank You
